

RUSMAR INCORPORATED CLIENT REFERENCES

Each year, Rusmar Incorporated has the opportunity to serve hundreds of clients in the landfill and remediation industries. If you're one of our valued customers who have made us the industry leader, welcome back! If you're new to Rusmar and our technology, we welcome the opportunity to provide you with the same level of service that keeps our long-term customers coming back.

EMISSION CONTROL

Since 1986, Rusmar Incorporated has compiled an extensive amount of experience controlling emissions from all types of sources in virtually every industry - from large pharmaceutical companies to small gas station tank removals. We have helped clients control odors from dredging, lagoon closures, transportation of biosolids, and a host of other applications. We have provided successful VOC control of TCE, benzene, toluene, and other harmful contaminants.

Please take a minute to review just a few of the Superfund Sites where the EPA and the U.S.A.C.E. have trusted our technology. Then, take a look at our partial MGP Site reference list that shows some of the opportunities we've had to help clients successfully clean up old Manufactured Gas Plant sites.

If you have an application that you would like us to help evaluate, please contact us and we will help you determine the best Long Duration Foam for your particular situation.

LANDFILL

Rusmar Incorporated serves domestic and international landfills operating from over 4000 t.p.d. to 50 t.p.d., both loose and bale. We are proud to say that some of our clients operate in some of the most extreme hot and cold climates imaginable. When you are ready to make a switch to the ultimate daily cover program, please call us for a list of references which match your site conditions.
